

At the Culpeper facility we make valve blocks for braking systems in your vehicles. This includes the cutting edge MKC1 which combines many functions in the braking system into one smaller unit. This new technology also enables the vehicle to have the ability of autonomous parking and braking. By the way another one of our facilities designs the LIDAR systems which is the technology that allows the autonomous driving, braking and parking. Pretty cool stuff!!

This is made possible by the most important part of Continental...our Employees! We run the CNC machining centers, high pressure washers, Labs, Machine Shop, Maintenance, Quality, Administrative and many more areas of the plant, to produce high-quality products safely every day.

Be sure to also visit our website, YouTube, Facebook and LinkedIn pages for videos and employee stories

Let your ideas shape the future! Become part of the Team and Drive for Success!

Culpeper, VA

LOCATION DETAILS

ONSITE BENEFITS
